NOTICES

This final report was submitted by personnel of the Disease Surveillance Branch, Epidemiology Division, USAF School of Aerospace Medicine, Aerospace Medical Division, AFSC, Brooks Air Force Base, Texas, under job order SUPTXXEP.

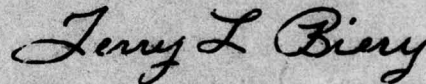

When U.S. Government drawings, specifications, or other data are used for any purpose other than a definitely related Government procurement operation, the Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the Government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data is not to be regarded by implication or otherwise, as in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell any patented invention that may in any way be related thereto.

This report has been reviewed by the Information Office (OI) and is releasable to the National Technical Information Service (NTIS). At NTIS, it will be available to the general public, including foreign nations.

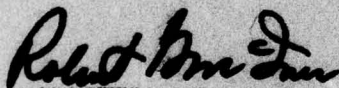

This technical report has been reviewed and is approved for publication.

DISTRIBUTION OF MOSQUITOES IN THE CONTINENTAL UNITED STATES

INTRODUCTION

This report provides Air Force personnel with a listing of all mosquito species known to have been collected on Air Force installations and a quick-reference listing of mosquito species known to occur in each State of the Continental United States (CONUS). Since a listing of mosquito species by State for all 48 States in CONUS is not available in the literature, this information will be useful to local, State, and Federal agencies (military and civilian).

The Entomology Section, Epidemiology Division, USAF School of Aerospace Medicine (USAFSAM), annually identifies approximately 90,000 mosquito specimens from CONUS Air Force installations.¹ This service is provided in accordance with AFR 161-1, Control of Vector-borne Diseases, and AFR 161-12, USAF Epidemiological Services. Since USAF installations are located in 40 of the 48 contiguous States, a complete, easy-to-use listing of the mosquitoes known to occur in each State is important to the Entomology Section. This compilation is quite useful in insuring the accurate identification of the many mosquitoes received from installations each year.

All USAF installations for which the Entomology Section has mosquito identification records (some dating back to 1943) are located on the map on page 5 of this report. Mosquito-species listings are provided for each of the 48 contiguous States and the District of Columbia. These by-State listings are compiled from four publications by Stanley J. Carpenter²⁻⁵. His works were selected as the reference sources because: (1) he has done extensive work with the mosquitoes of North America, has periodically

¹Mosquito identifications for CONUS USAF installations, CY 1977. Entomology Section, Disease Surveillance Branch, Epidemiology Division, USAFSAM, Brooks AFB, Tex., 1978.

²Carpenter, S. J., and W. J. LaCasse. Mosquitoes of North America (North of Mexico). Berkeley and Los Angeles: University of California Press, 1955.

³Carpenter, S. J. Review of recent literature on mosquitoes of North America. California Vector Views 15(8):71-98 (1968).

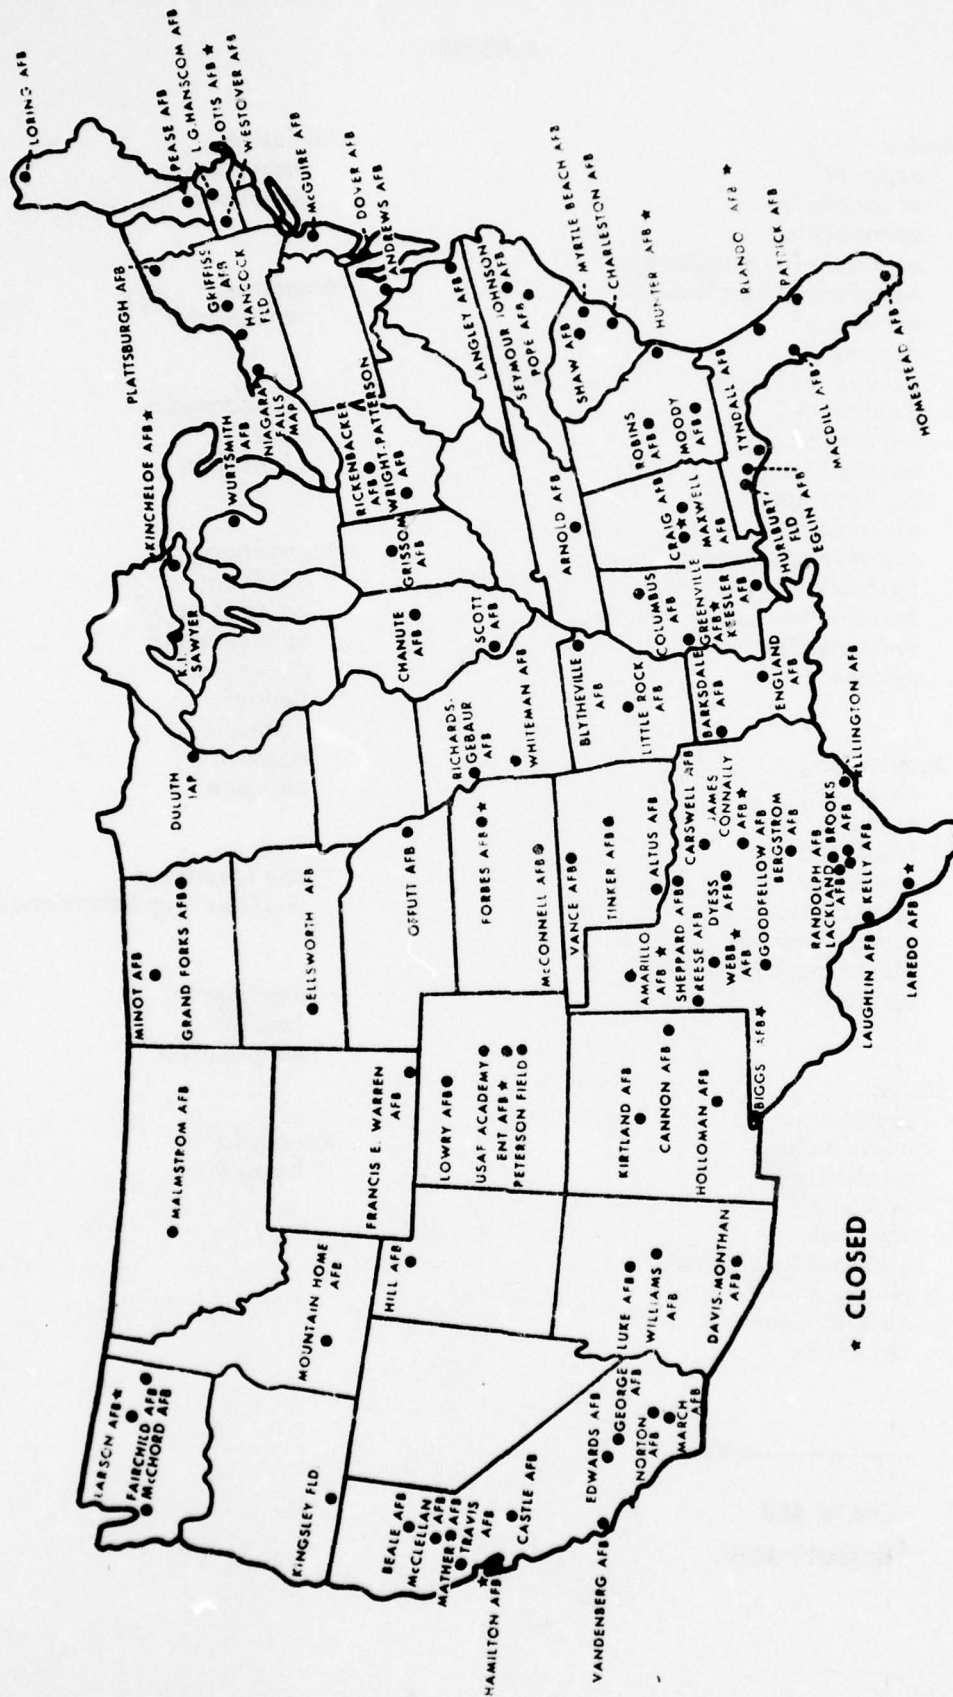

⁴Review of recent literature on mosquitoes of North America, Supplement I. California Vector Views 17(6):39-66 (1970).

⁵Review of recent literature on mosquitoes of North America, Supplement II. California Vector Views 21(12):73-99 (1974).

reviewed the taxonomic literature on mosquitoes of the United States, and has published information on the distribution records of these mosquito species; (2) his text² on mosquitoes of North America is the most widely accepted and used publication on mosquitoes of the United States; and (3) the use of a single recognized taxonomic expert eliminates having to interpret differences of opinion which exist among taxonomists. On the State listings, mosquito species are footnoted as to the USAF installation from which they have been recorded. Where the name of an installation has been changed, the current name is used. (Mosquito species not footnoted have been found in the State but not on a USAF installation.) States that have no USAF installation are identified by footnotes.

When questions arose concerning name changes of genera or species (e.g., the question of placing perturbans under Coquillettidia or Mansonia), Carpenter's most recent publication⁵ was used as the source for this compilation. (Carpenter has now retired; the last supplement to his text was published in 1974.) The Entomology Section, Epidemiology Division, USAFSAM, anticipates supplementing or updating this compilation on a periodic basis by obtaining current distribution information from mosquito experts in each state.
